Board of Retirement Sacramento County Employees' Retirement System 980 9th Street, Suite 1900 Sacramento, CA 95814

**Dear Board Members:** 

We are pleased to submit this Actuarial Valuation and Review as of June 30, 2020. It summarizes the actuarial data used in the valuation, analyzes the preceding year's experience, and establishes the funding requirements for fiscal year 2021-2022.

This report was prepared in accordance with generally accepted actuarial principles and practices at the request of the Board to assist in administering the Retirement System. The census information and financial information on which our calculations were based was prepared by the staff of the System. That assistance is gratefully acknowledged.

The actuarial calculations were directed under the supervision of Andy Yeung, ASA, MAAA, FCA and Enrolled Actuary. We are members of the American Academy of Actuaries and we meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinion herein. To the best of our knowledge, the information supplied in this actuarial valuation is complete and accurate. Further, in our opinion, the assumptions as approved by the Board are reasonably related to the experience of and the expectations for the System.

We look forward to reviewing this report at your next meeting and to answering any questions.

Sincerely,

Segal

Paul Angelo, FSA, EA, MAAA, FCA Senior Vice President and Actuary Andy Yeung, ASA, EA, MAAA, FCA Vice President and Actuary Molly Calcagno ASA, EA, MAAA Actuary

### **Purpose and Basis**

This report was prepared by Segal to present a valuation of the Sacramento County Employees' Retirement System ("SCERS" or "the System") as of June 30, 2020. The valuation was performed to determine whether the assets and contribution rates are sufficient to provide the prescribed benefits. The measurements shown in this actuarial valuation may not be applicable for other purposes. In particular, the measures herein are not necessarily appropriate for assessing the sufficiency of current Plan assets to cover the estimated cost of settling the Plan's accrued benefit obligations.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements; and changes in plan provisions or applicable law.

The contribution requirements presented in this report are based on:

- The benefit provisions of the pension plan, as administered by the Board of Retirement;
- The characteristics of covered active members, inactive vested members, and retired members and beneficiaries as of June 30, 2020, provided by SCERS;
- The assets of the Plan as of June 30, 2020, provided by SCERS;
- Economic assumptions regarding future salary increases and investment earnings;
- · Other actuarial assumptions regarding employee terminations, retirement, death, etc. and
- The funding policy adopted by the Board of Retirement.

One of the general goals of an actuarial valuation is to establish contributions which fully fund the System's liabilities, and which, as a percentage of payroll, remain as level as possible for each generation of active members. Annual actuarial valuations measure the progress toward this goal, as well as test the adequacy of the contribution rates.

In preparing this valuation, we have employed generally accepted actuarial methods and assumptions to evaluate the System's liabilities and future contribution requirements. Our calculations are based upon member data and financial information provided to us by the

System's staff. This information has not been audited by us, but it has been reviewed and found to be consistent, both internally and with prior year's information.

The contribution requirements are determined as a percentage of payroll. The System's employer rates provide for both Normal Cost and a contribution to amortize any unfunded or overfunded actuarial accrued liabilities. In this valuation, we have applied the funding policy adopted by the Board on June 19, 2013 and affirmed by the Board on February 21, 2018. Details of the funding policy are provided in *Section 4, Exhibit I* on pages 92 and 93.

A schedule of current amortization balances and payments may be found in *Section 3, Exhibit H* on pages 74 through 76. A graphical projection of the Unfunded Actuarial Accrued Liability (UAAL) amortization balances and payments has been included in *Section 3, Exhibit I* on pages 77 and 78.

The rates calculated in this report may be adopted by the Board for the fiscal year that extends from July 1, 2021 through June 30, 2022.

### **Valuation Highlights**

1. The results of this valuation reflect changes in the economic and demographic assumptions as recommended by Segal and adopted by the Board for the June 30, 2020 valuation. These changes were documented in our Actuarial Experience Study and are also outlined in Section 4, Exhibit I. These assumption changes resulted in an increase in the average employer rate of 2.39% of payroll and an increase in the aggregate member rate of 0.87% of payroll. There is also an increase in the UAAL amount of \$216.1 million. Out of the 2.39% of payroll increase in average employer rate, 0.92% is an increase in the Normal Cost rate and 1.47% is an increase in the UAAL rate.

The Board adopted a two-year phase-in of the cost impact of the changes in actuarial assumptions on the employer's UAAL rate only. The employer should be aware that their contributions for 2022-2023 (that will be established in the June 30, 2021 valuation) will increase again due to the further recognition of the cost impact of these changes in actuarial assumptions, including the interest cost associated with the phase-in. In this report, we have shown the rates for 2021-2022 both before and after the phase-in.

- The ratio of the actuarial value of assets to actuarial accrued liabilities decreased from 81.6% to 80.6%. On a market value of assets basis, the funded ratio decreased from 82.6% to 78.6%. The System's UAAL increased from \$2,192 million as of June 30, 2019 to \$2,464 million as of June 30, 2020. A reconciliation of the System's UAAL is provided in *Section 2, Subsection E*. A schedule of the current UAAL amortization amounts is provided in *Section 3, Exhibit H*. A graphical projection of the UAAL amortization bases and payments has been provided in *Section 3, Exhibit I*.
- Pg. 30 3. The aggregate employer rate increased from 29.35% of payroll to 31.42% of payroll (after first year of phase-in). The reasons for this change in contribution rate are: (i) the changes in actuarial assumptions, (ii) lower than expected returns on investments (after "smoothing"), (iii) lower than expected contributions, (iv) higher than expected COLA increases for Tier 1 retirees and beneficiaries, (v) higher than expected individual salary increases during 2019-2020, (vi) and other losses, offset to some degree by (vii) phasing in the cost impact of the changes in actuarial assumptions on the employer's UAAL rate over two years, (viii) lower UAAL rate due to higher than expected increase in total payroll, and (ix) changes in membership demographics. A reconciliation of the System's aggregate employer rate is provided in Section 2, Subsection F.
- Pg. 31 4. The aggregate member rate calculated in this valuation has increased from 11.54% of payroll to 12.35% of payroll. The increase in member rate is due to changes in actuarial assumption and a reduction in the COLA offset, offset to some extent by changes in membership demographics. A reconciliation of the System's aggregate member rate is provided in Section 2, Subsection F.
  - 5. As of June 30, 2020, about 41% of active members are enrolled in the CalPEPRA tiers. As a result of the implementation of the CalPEPRA tiers, the aggregate Normal Cost rate is lower by about 1.2% of payroll compared to what the aggregate Normal Cost rate would have been if all active members were enrolled in the legacy tiers.
- Pg. 20 6. As indicated in Section 2, Subsection B, the total net unrecognized investment <u>loss</u> as of June 30, 2020 is \$250.4 million (as compared to a net unrecognized investment gain of \$118.4 million as of June 30, 2019). This net investment loss will be recognized in

the determination of the actuarial value of assets for funding purposes over the next six years. That means that even if the System earns the assumed rate of investment return of 6.75% per year on a **market value** basis, there will still be net investment losses on the actuarial value of assets in the next few years. Therefore, if the actual market return is equal to the assumed rate of 6.75% and all the other actuarial assumptions are met, the net employer contribution requirements would increase in the next few years.

The unrecognized investment losses represent about 2.5% of the market value of assets. Unless offset by future investment gains or other favorable experience, the recognition of the \$250.4 million in past market losses is expected to have an impact on the System's future funded ratio and the aggregate employer contributions. This potential impact may be illustrated as follows:

- a. If the deferred losses were recognized immediately in the actuarial value of assets, the funded percentage would decrease from 80.6% to 78.6%.
  - For comparison purposes, if all the deferred gains in the June 30, 2019 valuation had been recognized immediately in the June 30, 2019 valuation, the funded percentage would have increased from 81.6% to 82.6%.
- b. If the deferred losses were recognized immediately in the actuarial value of assets, the aggregate employer contribution rate would increase from 31.42% of payroll to 33.1% of payroll. Note that both of these rates are calculated with the two-year phase-in of the UAAL rate impact from the assumption changes.
  - For comparison purposes, if all the deferred gains in the June 30, 2019 valuation had been recognized immediately in the June 30, 2019 valuation, the aggregate employer contribution rate would have decreased from 29.44% of payroll to 28.6% of payroll.
- 7. The \$144.0 million in the Contingency Reserve as of June 30, 2020 is available to credit interest to the valuation reserve accounts or to offset actuarial losses in future valuations at the Board's discretion. If that amount were applied in the June 30, 2020 valuation, the aggregate employer contribution rate would have decreased by about 1.0% of payroll.
- 8. It is important to note that this actuarial valuation is based on plan assets as of June 30, 2020. Due to the COVID-19 pandemic, market conditions have changed significantly during 2020. The Plan's funded status does not reflect short-term fluctuations of the market, but rather is based on the market values on the last day of the Plan Year. While it is impossible to determine how the pandemic will continue to affect market conditions prior to next year's valuation, Segal is available to prepare projections of potential outcomes upon request.
- 9. On July 30, 2020, the California Supreme Court issued a decision in the case of Alameda County Deputy Sheriffs' Association et al. v. Alameda County Employees' Retirement Association (ACERA) and Board of Retirement of ACERA. That decision has important implications for SCERS and its members. In particular, that decision requires pension systems like SCERS to exclude certain pay items from a legacy member's compensation earnable. It should be noted that neither the June 30, 2020 assets provided by SCERS nor the liabilities we calculated using the membership data provided by SCERS reflect the financial impact of the Supreme Court decision.

- 10. Rio Linda Elverta Recreation and Parks District became a participating employer effective October 1, 2017. Employees are enrolled in Miscellaneous Tier 5, regardless of any reciprocity with other retirement systems. Besides paying the Normal Cost rate, the employer is only responsible for its share of the UAAL rate based only on actuarial experience that occurred on or after July 1, 2017.
- 11. Actuarial Standard of Practice No. 51 (ASOP 51) requires actuaries to identify and assess risks that "may reasonably be anticipated to significantly affect the plan's future financial condition." Examples of key risks listed that are particularly relevant to SCERS are asset/liability mismatch risk, investment risk, and longevity risk. The standard also requires an actuary to consider if there is any ongoing contribution risk to the plan, however it does not require the actuary to evaluate the particular ability or willingness of contributing entities to make contributions when due, nor does it require the actuary to assess the likelihood or consequences of future changes in applicable law.

The actuary's initial assessment can be strictly a qualitative discussion about potential adverse experience and the possible effect on future results, but it may also include quantitative numerical demonstrations where informative. The actuary is also encouraged to consider a recommendation as to whether a more detailed assessment or risk report would be significantly beneficial for the intended user in order to examine particular financial risks. When making that recommendation, the actuary will take into account such factors as the plan's design, risk profile, maturity, size, funded status, asset allocation, cash flow, possible insolvency and current market conditions.

Since the actuarial valuation results are dependent on a fixed set of assumptions and data as of a specific date, there is risk that emerging results may differ, perhaps significantly, as actual experience is fluid and will not exactly track current assumptions. This potential divergence may have a significant impact on the future financial condition of the plan. Following the completion of the June 30, 2019 valuation, we prepared a stand-alone Risk Assessment report dated February 12, 2020 by using membership and financial information as provided in the actuarial valuation as of June 30, 2019. That report includes various projections (both deterministic and stochastic) of future results under different investment return scenarios together with the assumptions adopted for the June 30, 2019 valuation.

A copy of the stand-alone risk assessment report associated with this June 30, 2020 valuation, including the quantitative analyses recommended by Segal in consultation with SCERS staff, will be available in the first quarter of 2021. In the interim, we have included a brief discussion of key risks that may affect the System in Section 2, Subsection J.

Based on June 30, 2020 projected annual compensation.
 Based on single full-rates payable by members who enter on or after January 1, 1975.
 Based on June 30, 2020 average projected annual compensation for members in each respective tier.

<sup>&</sup>lt;sup>4</sup> Before reflecting members in legacy tiers agreeing to contribute an additional portion of the Normal Cost.

<sup>&</sup>lt;sup>5</sup> There is a reduction in the member rate for Safety Tier 1 primarily as a result of an increase in the COLA offset as the number of active members in that Tier shrunk by about one-third during 2019-2020. Also, the remaining members are expected to retire earlier under the new assumptions used in this valuation.

# **Important Information About Actuarial Valuations**

An actuarial valuation is a budgeting tool with respect to the financing of future projected obligations of a pension plan. It is an estimated forecast – the actual long-term cost of the plan will be determined by the actual benefits and expenses paid and the actual investment experience of the plan.

In order to prepare a valuation, Segal relies on a number of input items. These include:

| Plan provisions define the rules that will be used to determine benefit payments, and those rules, or the interpretation of them, may change over time. Even where they appear precise, outside factors may change how they operate. It is important to keep Segal informed with respect to plan provisions and administrative procedures, and to review the plan summary included in our report to confirm that Segal has correctly interpreted the plan of benefits.  An actuarial valuation for a plan is based on data provided to the actuary by the System. Segal does not audit such data for completeness or accuracy, other than reviewing it for obvious inconsistencies compared to prior data and other information that appears unreasonable. It is important for Segal to receive the best possible data and to be informed about any known incomplete or inaccurate data.  The valuation is based on the Market Value of Assets as of the valuation date, as provided by the System. The System uses a "Valuation Value of Assets" that differs from market value to gradually reflect year-to-year changes                                                                                        |

| such data for completeness or accuracy, other than reviewing it for obvious inconsistencies compared to prior data and other information that appears unreasonable. It is important for Segal to receive the best possible data and to be informed about any known incomplete or inaccurate data.  The valuation is based on the Market Value of Assets as of the valuation date, as provided by the System. The                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| in the Market Value of Assets in determining the contribution requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| In preparing an actuarial valuation, Segal projects the benefits to be paid to existing plan participants for the rest of their lives and the lives of their beneficiaries. This projection requires actuarial assumptions as to the probability of death, disability, termination, and retirement of each participant for each year. In addition, the benefits projected to be paid for each of those events in each future year reflect actuarial assumptions as to salary increases and cost-of-living adjustments. The projected benefits are then discounted to a present value, based on the assumed rate of return that is expected to be achieved on the plan's assets. There is a reasonable range for each assumption used in the projection and the results may vary materially based on which assumptions are selected. It is important for any user of an actuarial valuation to understand this concept. Actuarial assumptions are periodically reviewed to ensure that future valuations reflect emerging plan experience. While future changes in actuarial assumptions may have a significant impact on the reported results that does not mean that the previous assumptions were unreasonable. |
| Segal valuation results are based on proprietary actuarial modeling software. The actuarial valuation models generate a comprehensive set of liability and cost calculations that are presented to meet regulatory, legislative and client requirements. Our Actuarial Technology and Systems unit, comprised of both actuaries and programmers, is responsible for the initial development and maintenance of these models. The models have a modular structure that allows for a high degree of accuracy, flexibility and user control. The client team programs the assumptions and the plan provisions, validates the models, and reviews test lives and results, under the supervision of the responsible actuary.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

The user of Segal's actuarial valuation (or other actuarial calculations) should keep the following in mind:

The actuarial valuation is prepared at the request of the System. Segal is not responsible for the use or misuse of its report, particularly by any other party.

An actuarial valuation is a measurement of the plan's assets and liabilities at a specific date. Accordingly, except where otherwise noted, Segal did not perform an analysis of the potential range of future financial measures. The actual long-term cost of the plan will be determined by the actual benefits and expenses paid and the actual investment experience of the plan. Future contribution requirements may differ from those determined in the valuation because of:

- Differences between actual experience and anticipated experience;
- · Changes in actuarial assumptions or methods; and
- · Changes in statutory provisions.

Some actuarial results in this report are not rounded, but that does not imply precision.

If the System is aware of any event or trend that was not considered in this valuation that may materially change the results of the valuation, Segal should be advised, so that we can evaluate it.

Segal does not provide investment, legal, accounting, or tax advice. Segal's valuation is based on our understanding of applicable guidance in these areas and of the plan's provisions, but they may be subject to alternative interpretations. The System should look to their other advisors for expertise in these areas.

As Segal has no discretionary authority with respect to the management or assets of the Plan, it is not a fiduciary in its capacity as actuaries and consultants with respect to the Plan.

#### A. Member Data

The Actuarial Valuation and Review considers the number and demographic characteristics of covered members, including active members, inactive vested members, retired members and beneficiaries.

This section presents a summary of significant statistical data on these member groups.

More detailed information for this valuation year and the preceding valuation can be found in Section 3, Exhibits A, B, and C.

Member Population: 2011 – 2020

| Year Ended<br>June 30 | Active<br>Members | Inactive Vested<br>Members <sup>1</sup> | Retired<br>Members<br>and<br>Beneficiaries | Total<br>Non-Actives | Ratio of<br>Non-Actives<br>to Actives | Ratio of<br>Retired<br>Members and<br>Beneficiaries<br>to Actives |

<sup>&</sup>lt;sup>1</sup> Includes inactive members due a refund of member contributions.

#### **Active Members**

Plan costs are affected by the age, years of service and compensation of active members. In this year's valuation, there were 12,650 active members with an average age of 45.7, average years of service of 11.9 years and average compensation of \$84,625. The 12,678 active members in the prior valuation had an average age of 45.7, average service of 11.9 years and average compensation of \$81,901.

Among the active members, there were none with unknown age information.

#### Distribution of Active Members as of June 30, 2020

#### **Inactive Members**

In this year's valuation, there were 3,791 members with a vested right to a deferred or immediate vested benefit or entitled to a return of their member contributions versus 3,602 in the prior valuation.

#### **Retired Members and Beneficiaries**

As of June 30, 2020, 11,012 retired members and 1,720 beneficiaries were receiving total monthly benefits of \$46,579,173. For comparison, in the previous valuation, there were 10,720 retired members and 1,661 beneficiaries receiving monthly benefits of \$43,599,217.

As of June 30, 2020, the average monthly benefit for retired members and beneficiaries is \$3,658, compared to \$3,521 in the previous valuation. The average age for retired members and beneficiaries is 70.1 in the current valuation, compared with 69.8 in the prior valuation.

Distribution of Retired Members and Beneficiaries as of June 30, 2020

### **Historical Plan Population**

The chart below demonstrates the progression of the active population over the last ten years. The chart also shows the growth among the retired population over the same time period.

#### **B. Financial Information**

Retirement plan funding anticipates that, over the long term, both contributions and investment earnings (less investment fees and administrative expenses) will be needed to cover benefit payments. Retirement plan assets change as a result of the net impact of these income and expense components.

Additional financial information, including a summary of transactions for the valuation year, is presented in Section 3, Exhibits D, E, F and G.

It is desirable to have level and predictable plan costs from one year to the next. For this reason, the Board has approved an asset valuation method that gradually adjusts to market value. Under this valuation method, the full value of market fluctuations is not recognized in a single year and, as a result, the asset value and the plan costs are more stable. The amount of the adjustment to recognize market value is treated as income, which may be positive or negative. Realized and unrealized gains and losses are treated equally and, therefore, the sale of assets has no immediate effect on the actuarial value.

#### Comparison of Contributions Made with Benefits for Years Ended June 30, 2011 – 2020

#### Determination of Actuarial Value of Assets for Year Ended June 30, 2020

|     |                                    |                 | (a) | Total unrecognized return as of June 30, 2020 | \$(250.381.162) |

<sup>&</sup>lt;sup>2</sup> This amount has been applied in this valuation to offset the legacy members' COLA contribution rates over their expected remaining active working career of 8.69 years. There is a reduction in the aggregate member rate of 0.21% when expressed as a percent of payroll for all members in this valuation.

<sup>&</sup>lt;sup>3</sup> Based on the latest estimate under SCERS' Declining Employer Payroll Policy of the asset shortfall for North Highlands Fire available as of June 30, 2019 adjusted to June 30, 2020 with interest at the assumed rate of investment return (i.e., 7.00% as of June 30, 2019).

The Market Value, Actuarial Value and Valuation Value of Assets are representations of the Plan's financial status. As investment gains and losses are gradually taken into account, the Actuarial Value of Assets tracks the Market Value of Assets. The Valuation Value of Assets is the actuarial value, excluding any non-valuation reserves. The Valuation Value of Assets is significant because the Plan's liabilities are compared to these assets to determine what portion, if any, remains unfunded. Amortization of the unfunded actuarial accrued liability is an important element in determining the contribution requirement.

Market Value, Actuarial Value, and Valuation Value of Assets as of June 30, 2007 – 2020

### **C.** Actuarial Experience

To calculate any actuarially determined contribution, assumptions are made about future events that affect the amount and timing of benefits to be paid and assets to be accumulated. Each year actual experience is measured against the assumptions. If overall experience is more favorable than anticipated (an actuarial gain), the actuarially determined contribution will decrease from the previous year. On the other hand, the actuarially determined contribution will increase if overall actuarial experience is less favorable than expected (an actuarial loss).

Taking account of experience gains or losses in one year without making a change in assumptions reflects the belief that the single year's experience was a short-term development and that, over the long term, experience will return to the original assumptions. For contribution requirements to remain stable, assumptions should approximate experience.

If assumptions are changed, the contribution requirement is adjusted to take into account a change in experience anticipated for all future years. There are changes in actuarial assumptions reflected in this valuation.

The total loss is \$83.7 million, which includes \$19.9 million from investment losses, a loss of \$18.5 million from contribution experience and \$45.3 in losses from all other sources. The net experience variation from individual sources other than investments and contributions was 0.4% of the Actuarial Accrued Liability. A discussion of the major components of the actuarial experience is on the following pages.

#### Actuarial Experience for Year Ended June 30, 2020

| 1 | Net loss from investments <sup>1</sup>      | \$(19,877,000)      |
|---|---------------------------------------------|---------------------|
| 2 | Net loss from contribution experience       | (18,520,000)        |
| 3 | Net loss from other experience <sup>2</sup> | <u>(45,262,000)</u> |
| 4 | Net experience loss: 1 + 2 + 3              | \$(83,659,000)      |

<sup>&</sup>lt;sup>1</sup> Details on next page.

<sup>&</sup>lt;sup>2</sup> See Section 2, Subsection E for further details. Does not include the effect of plan or assumption changes, if any.

#### **Investment Experience**

A major component of projected asset growth is the assumed rate of return. The assumed return should represent the expected long-term rate of return, based on the Plan's investment policy. The rate of return on the Market Value of Assets was 2.97% for the year ended June 30, 2020.

For valuation purposes, the assumed rate of return on the Valuation Value of Assets was 7.00%. The actual rate of return on a valuation basis for the 2019-2020 plan year was 6.79%. Since the actual return for the year was less than the assumed return, the Plan experienced an actuarial loss during the year ended June 30, 2020 with regard to its investments.

#### Investment Experience for Year Ended June 30, 2020

|   |                                   | Market Value    | Actuarial Value | Valuation Value |
|---|-----------------------------------|-----------------|-----------------|-----------------|
| 1 | Net investment income             | \$292,913,000   | \$661,676,000   | \$652,027,000   |
| 2 | Average value of assets           | 9,862,774,000   | 9,744,393,000   | 9,598,627,000   |
| 3 | Rate of return: 1 ÷ 2             | 2.97%           | 6.79%           | 6.79%           |
| 4 | Assumed rate of return            | 7.00%           | 7.00%           | 7.00%           |
| 5 | Expected investment income: 2 x 4 | \$690,394,000   | \$682,108,000   | \$671,904,000   |
| 6 | Actuarial gain/(loss): 1 - 5      | \$(397,481,000) | \$(20,432,000)  | \$(19,877,000)  |

Because actuarial planning is long term, it is useful to see how the assumed investment rate of return has followed actual experience over time. The chart below shows the rate of return on an actuarial and valuation basis compared to the actual market value investment return for the last ten years, including averages over select time periods.

Investment Return – Market Value, Actuarial Value and Valuation Value: 2011 – 2020

| Market Value<br>Investment Return  |                 | Actuarial Value<br>Investment Return |               | Valuation Value<br>Investment Return |               |         |
|------------------------------------|-----------------|--------------------------------------|---------------|--------------------------------------|---------------|---------|
| Year Ended<br>June 30              | Amount          | Percent                              | Amount        | Percent                              | Amount        | Percent |
| 2011                               | \$1,200,204,000 | 23.81%                               | \$244,352,000 | 3.89%                                | \$269,937,000 | 4.37%   |
| 2012                               | (9,702,000)     | (0.16%)                              | 166,087,000   | 2.57%                                | 238,467,000   | 3.73%   |
| 2013                               | 779,729,000     | 12.73%                               | 333,523,000   | 5.07%                                | 341,373,000   | 5.19%   |

| 2015                               | 152,368,000     | 1.94%                                | 609,387,000   | 8.28%                                | 572,950,000   | 7.82%   |
| 2016                               | (78,761,000)    | (1.00%)                              | 516,765,000   | 6.57%                                | 521,978,000   | 6.70%   |
| 2017                               | 1,042,009,000   | 13.55%                               | 567,473,000   | 6.88%                                | 610,522,000   | 7.46%   |
| 2018                               | 834,484,000     | 9.73%                                | 624,550,000   | 7.21%                                | 598,171,000   | 6.93%   |
| 2019                               | 665,186,000     | 7.17%                                | 675,738,000   | 7.39%                                | 628,142,000   | 6.91%   |
| 2020                               | 292,913,000     | 2.97%                                | 661,676,000   | 6.79%                                | 652,027,000   | 6.79%   |
| Most recent five average return    | -year geometric | 6.36%                                |               | 6.97%                                |               | 6.96%   |
| Most recent ten-<br>average return | year geometric  | 8.43%                                |               | 6.32%                                |               | 6.39%   |

Section 2, Subsection B described the actuarial asset valuation method that gradually recognizes fluctuations in the market value rate of return. The goal of this is to stabilize the actuarial rate of return and to produce more level pension plan costs.

#### Market, Actuarial and Valuation Rates of Return for Years Ended June 30, 2007 – 2020

#### **Contributions**

Contributions for the year ended June 30, 2020 totaled \$400.7 million (including \$0.3 million in contributions made by an employer under the Declining Employer Payroll Policy, but excluding \$4.8 million in receivable and actual contributions made by a withdrawn employer required to pay off its unfunded liability), compared to the projected amount of \$425.9 million. This resulted in a loss of \$18.5 million for the year, when adjusted for timing. These exclude any contributions for withdrawn employers, if any.

#### Non-Investment Experience

There are other differences between the expected and the actual experience that appear when the new valuation is compared with the projections from the previous valuation. These include:

- · the extent of turnover among participants,
- retirement experience (earlier or later than projected),
- mortality (more or fewer deaths than projected),
- the number of disability retirements (more or fewer than projected),
- salary increases (greater or smaller than projected), and
- cost-of-living adjustments (COLAs) higher or lower than anticipated.

The net loss from this other experience for the year ended June 30, 2020 amounted to \$45.3 million, which is 0.4% of the Actuarial Accrued Liability. See *Section 2, Subsection E* for a detailed development of the Unfunded Actuarial Accrued Liability.

### D. Other Changes in the Actuarial Accrued Liability

#### **Actuarial Assumptions**

The assumption changes reflected in this report were based on the July 1, 2016 through June 30, 2019 Actuarial Experience Study report dated May 11, 2020.

- These changes increased the Actuarial Accrued Liability by 1.75% and increased the Normal Cost by 5.56%.
- The assumption changes include changes to inflation, investment return, merit and promotion salary increases, retirement from active
  employment, retirement age for deferred vested members, percent of members assumed to go on to work for a reciprocal system,
  reciprocal salary increases, pre-retirement mortality, healthy life post-retirement mortality, disabled life post-retirement mortality,
  beneficiary mortality, termination, and disability incidence (duty and non-duty).

Details on actuarial assumptions and methods are in Section 4, Exhibit I.

#### **Plan Provisions**

There were no changes in plan provisions since the prior valuation.

A summary of plan provisions is in Section 4, Exhibit II.

# **E. Development of Unfunded Actuarial Accrued Liability**

Development for Year Ended June 30, 2020

| 1 | Unfunded Actuarial Accrued Liability at beginning of year    |              | \$2,192,207,000 |
|---|--------------------------------------------------------------|--------------|-----------------|
| 2 | Total Normal Cost at middle of year                          |              | 249,783,000     |
| 3 | Expected employer and member contributions <sup>1</sup>      |              | (425,896,000)   |
| 4 | Interest                                                     |              | 148,044,000     |
| 5 | Expected Unfunded Actuarial Accrued Liability at end of year |              | \$2,164,138,000 |
| 6 | Changes due to:                                              |              |                 |
|   | a) Investment return less than expected (after "smoothing")  | \$19,877,000 |                 |
|   | b) Actual contributions less than expected <sup>1, 2</sup>   | 18,520,000   |                 |
|   | c) Individual salary increases higher than expected          | 10,752,000   |                 |
|   | d) COLA increases higher than expected                       | 17,282,000   |                 |
|   | e) Other experience losses                                   | 17,228,000   |                 |
|   | f) Changes in actuarial assumptions                          | 216,097,000  |                 |
|   | Total changes                                                |              | \$299,756,000   |
| 7 | Unfunded Actuarial Accrued Liability at end of year          |              | \$2,463,894,000 |

Note: The sum of items 6c through 6e equals the "Net loss from other experience" shown in Section 2, Subsection C.

<sup>&</sup>lt;sup>1</sup> Contribution from Sacramento Metropolitan Fire District is excluded from both the expected and the actual contributions.

<sup>&</sup>lt;sup>2</sup> Due to the one-year lag in implementation of the contribution rates.

#### F. Recommended Contribution

The recommended contribution is equal to the employer Normal Cost payment and a payment on the Unfunded Actuarial Accrued Liability. The Board adopted a two-year phase-in of the cost impact of the changes in actuarial assumptions on the employer's UAAL rate only. As of June 30, 2020, the average recommended employer contribution is 31.42% of compensation, after the phase-in.

The Board sets the funding policy used to calculate the recommended contribution based on layered amortization periods. See *Section 4, Exhibit I* for further details on the funding policy.

The contribution requirement as of June 30, 2020 is based on the data previously described, the actuarial assumptions and Plan provisions described in *Section 4*, including all changes affecting future costs adopted at the time of the actuarial valuation, actuarial gains and losses, and changes in the actuarial assumptions.

#### Average Recommended Employer Contribution for Year Ended June 30

|   |                                                        | 2020                          |                             | 2019                    |                             |
|---|--------------------------------------------------------|-------------------------------|-----------------------------|-------------------------|-----------------------------|
|   |                                                        | Amount<br>(\$ in '000s)       | % of Projected Compensation | Amount<br>(\$ in '000s) | % of Projected Compensation |
| 1 | Total Normal Cost                                      | \$274,029                     | 25.60%                      | \$249,783               | 24.06%                      |
| 2 | Expected member Normal Cost contributions              | (132,208)                     | <u>(12.35%)</u>             | <u>(120,240)</u>        | <u>(11.58%)</u>             |
| 3 | Employer Normal Cost: 1 + 2                            | \$141,821                     | 13.25%                      | \$129,543               | 12.48%                      |
| 4 | Actuarial Accrued Liability <sup>1</sup>               | 12,538,239                    |                             | 11,749,754              |                             |
| 5 | Valuation Value of Assets <sup>1</sup>                 | 10,074,345                    |                             | 9,557,547               |                             |
| 6 | Unfunded Actuarial Accrued Liability: 4 - 5            | \$2,463,894                   |                             | \$2,192,207             |                             |
| 7 | Payment on Unfunded Actuarial Accrued Liability        | <u>\$194,486</u> <sup>2</sup> | 18.17%²                     | <u>\$176,113</u>        | 16.96%                      |
| 8 | Total average recommended employer contribution: 3 + 7 | \$336,3072                    | <u>31.42%</u> <sup>2</sup>  | \$305,656               | <u>29.44%</u>               |
| 9 | Projected compensation                                 | \$1,070,512                   |                             | \$1,038,341             |                             |

Note: Contributions are assumed to be paid at the middle of the year.

<sup>&</sup>lt;sup>1</sup> Excludes non-valuation reserves and designations.

<sup>&</sup>lt;sup>2</sup> After reflecting two-year phase-in.

### Reconciliation of Average Recommended Employer Contribution Rate

The chart below details the changes in the average recommended employer contribution rate from the prior valuation to the current year's valuation.

#### Reconciliation from June 30, 2019 to June 30, 2020

|    |                                                                                                                       | Contribution<br>Rate | Estimated Annual<br>Dollar Amount <sup>1</sup><br>(\$ in '000s) |
|----|-----------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------|
| 1  | Average Recommended Employer Contribution as of June 30, 2019                                                         | 29.35%               | \$314,152                                                       |
| 2  | Effect of investment return less than expected (after "smoothing")                                                    | 0.13%                | 1,392                                                           |
| 3  | Effect of actual contributions less than expected                                                                     | 0.12%                | 1,285                                                           |
| 4  | Effect of individual salary increases higher than expected                                                            | 0.07%                | 749                                                             |
| 5  | Effect of decrease in UAAL rate from higher than expected increase in total payroll                                   | (0.06%)              | (642)                                                           |
| 6  | Effect of COLA increases higher than expected                                                                         | 0.11%                | 1,178                                                           |
| 7  | Effect of changes in active member demographics                                                                       | (0.03%)              | (267)                                                           |

<sup>&</sup>lt;sup>1</sup> Includes elected officials (Board of Supervisors, Sheriff, District Attorney and Assessor).

#### **G. Funded Status**

A commonly reported piece of information regarding the Plan's financial status is the funded ratio. These ratios compare the Market and Actuarial Value of Assets to the Actuarial Accrued Liability of the Plan. Higher ratios indicate a relatively well-funded plan while lower ratios may indicate recent changes to actuarial assumptions, funding of the plan below actuarial requirements, poor asset performance, or a variety of other causes.

The chart below depicts a history of the funded ratio for the Plan. The chart on the next page shows the Plan's schedule of funding progress for the last ten years.

The funded status measures shown in this valuation are appropriate for assessing the need for or amount of future contributions. However, they are not necessarily appropriate for assessing the sufficiency of Plan assets to cover the estimated cost of settling the Plan's benefit obligations. As the chart below shows, the measures are different depending on whether the Market or Actuarial Value of Assets is used.

#### Funded Ratio for Years Ended June 30, 2007 – 2020

Schedule of Funding Progress for Years Ended June 30, 2011 – 2020

|-------------------------------------------------|--------------------------------------|-------------------------------------------------------------|-------------------------------------|----------------------------------|------------------------|---------------------------------------------------------------------------|
| 2011                                            | \$6,420,824,000                      | \$7,382,897,000                                             | \$962,073,000                       | 87.0%                            | \$880,766,000          | 109.2%                                                                    |
| 2012                                            | 6,529,895,000                        | 7,838,223,000                                               | 1,308,328,000                       | 83.3                             | 875,672,000            | 149.4                                                                     |
| 2013                                            | 6,797,757,000                        | 8,210,980,000                                               | 1,413,223,000                       | 82.8                             | 877,657,000            | 161.0                                                                     |
| 2014                                            | 7,312,993,000                        | 8,580,928,000                                               | 1,267,935,000                       | 85.2                             | 879,999,000            | 144.1                                                                     |
| 2015                                            | 7,838,825,000                        | 9,028,679,000                                               | 1,189,854,000                       | 86.8                             | 897,341,000            | 132.6                                                                     |
| 2016                                            | 8,236,402,000                        | 9,436,090,000                                               | 1,199,688,000                       | 87.3                             | 938,555,000            | 127.8                                                                     |
| 2017                                            | 8,665,226,000                        | 10,680,998,000                                              | 2,015,772,000                       | 81.1                             | 980,359,000            | 205.6                                                                     |
| 2018                                            | 9,123,004,000                        | 11,213,263,000                                              | 2,090,259,000                       | 81.4                             | 1,007,815,000          | 207.4                                                                     |
| 2019                                            | 9,703,313,000                        | 11,895,520,000                                              | 2,192,207,000                       | 81.6                             | 1,038,341,000          | 211.1                                                                     |
| 2020                                            | 10,229,760,000                       | 12,693,655,000                                              | 2,463,894,000                       | 80.6                             | 1,070,512,000          | 230.2                                                                     |

Note: Results may not total due to rounding.

<sup>&</sup>lt;sup>1</sup> Includes contingency reserve and other non-valuation reserves.

#### H. Actuarial Balance Sheet

An overview of the Plan's funding is given by an Actuarial Balance Sheet. In this approach, first the amount and timing of all future payments that will be made by the Plan for current participants is determined. Then these payments are discounted at the valuation interest rate to the date of the valuation, thereby determining the present value, referred to as the Actuarial Present Value of Future Benefits of the Plan.

Second, this Actuarial Present Value of Future Benefits is compared to the assets. The "assets" for this purpose include the net amount of assets already accumulated by the Plan, the present value of future member contributions, the present value of future employer Normal Cost contributions, and the present value of future employer amortization payments for the Unfunded Actuarial Accrued Liability.

#### Actuarial Balance Sheet for Year Ended June 30, 2020 (\$ in '000s)

|                                                                                                       | Basic        | COLA        | Total        |

Note: Results may not total due to rounding.

<sup>&</sup>lt;sup>1</sup> Based on the latest estimate under SCERS' Declining Employer Payroll Policy of the asset shortfall for North Highlands Fire available as of June 30, 2019 adjusted to June 30, 2020 with interest at the assumed rate of investment return (i.e., 7.00% as of June 30, 2019).

#### **I. Volatility Ratios**

Retirement plans are subject to volatility in the level of required contributions. This volatility tends to increase as retirement plans become more mature.

The Asset Volatility Ratio (AVR), which is equal to the Market Value of Assets divided by total payroll, provides an indication of the potential contribution volatility for any given level of investment volatility. A higher AVR indicates that the plan is subject to a greater level of contribution volatility. This is a current measurement since it is based on the current level of assets.

The current AVR is about 9.3. This means that a 1% asset gain or loss (relative to the assumed investment return) translates to about 9.3% of one-year's payroll. Since actuarial gains and losses are amortized over 20 years, there would be a 0.7% of payroll decrease/(increase) in the required contribution for each 1% asset gain/(loss).

The Liability Volatility Ratio (LVR), which is equal to the Actuarial Accrued Liability divided by payroll, provides an indication of the longer-term potential for contribution volatility for any given level of investment volatility. This is because, over an extended period of time, the plan's assets should track the plan's liabilities.

The LVR also indicates how volatile contributions will be in response to changes in the Actuarial Accrued Liability due to actual experience or to changes in actuarial assumptions. The current LVR is about 11.7 but is 9.6 for Miscellaneous compared to 18.9 for Safety. This means that assumption changes will have a greater impact on employer contribution rates for Safety than Miscellaneous.

The chart on the next page shows how the asset and liability volatility ratios have varied over time.

#### Volatility Ratios for Years Ended 2011 – 2020

| Year Ended | Asset Volatility Ratio |        | Liabilit | y Volatility R | atio   |       |
|------------|------------------------|--------|----------|----------------|--------|-------|
| June 30    | Miscellaneous          | Safety | Total    | Miscellaneous  | Safety | Total |
| 2011       | 5.8                    | 11.6   | 7.0      | 6.9            | 14.0   | 8.4   |
| 2012       | 5.8                    | 11.0   | 6.9      | 7.5            | 14.5   | 9.0   |
| 2013       | 6.6                    | 11.7   | 7.7      | 7.9            | 14.6   | 9.4   |
| 2014       | 7.6                    | 13.2   | 8.9      | 8.1            | 15.2   | 9.8   |
| 2015       | 7.5                    | 13.0   | 8.8      | 8.4            | 15.8   | 10.1  |
| 2016       | 7.0                    | 12.2   | 8.2      | 8.4            | 15.7   | 10.1  |
| 2017       | 7.4                    | 13.5   | 8.8      | 8.9            | 17.8   | 10.9  |
| 2018       | 7.8                    | 14.0   | 9.2      | 9.1            | 18.0   | 11.1  |
| 2019       | 8.0                    | 14.6   | 9.5      | 9.4            | 18.6   | 11.5  |
| 2020       | 7.8                    | 14.4   | 9.3      | 9.6            | 18.9   | 11.7  |

#### J. Risk Assessment

Since the actuarial valuation results are dependent on a fixed set of assumptions and data as of a specific date, there is risk that emerging results may differ, perhaps significantly, as actual experience is fluid and will not exactly track current assumptions. This potential divergence may have a significant impact on the future financial condition of the plan.

Following the completion of the June 30, 2019 valuation, we prepared a stand-alone risk assessment report dated February 12, 2020 by using membership and financial information as provided in the actuarial valuation as of June 30, 2019. That report includes various projections (both deterministic and stochastic) of future results under different investment return scenarios together with the assumptions adopted for the June 30, 2019 valuation. A copy of the stand-alone risk assessment report associated with this June 30, 2020 valuation, including the additional analyses recommended by Segal in consultation with SCERS staff will be available in the first quarter of 2021. While this section does not contain a detailed analysis of the potential range of future measurements, it does include a concise discussion of some of the primary risks that may affect the Plan's future financial condition.

This section provides descriptions and basic assessments of the primary risks that are likely to have an ongoing influence on the Plan's financial health, as well as a discussion of historical trends and maturity measures:

#### **Risk Assessments**

 Asset/Liability Mismatch Risk (the potential that future plan experience does not affect asset and liability values in the same way, causing them to diverge)

The most significant asset/liability mismatch risk to the Plan is investment risk, as discussed below. In fact, investment risk has the potential to impact asset/liability mismatch in two ways. The first mismatch is evident in annual valuations: when asset values deviate from assumptions they are typically independent from liability changes. The second mismatch can be caused when systemic asset deviations from assumptions may signal the need for an assumption change, which causes liability values and contribution rates to move in the opposite direction from any change in the expected experience of asset growth rates.

Asset/liability mismatch can also be caused by demographic assumption risk such as longevity, which affects liabilities but have no impact on asset levels. This risk is also discussed below.

Investment Risk (the risk that investment returns will be different than expected)

The investment return assumption is a long-term, static assumption for valuation purposes even though in reality market experience can be quite volatile in any given year. That volatility can cause significant changes in the financial health of the plan, affecting both funded status and contribution rates. The inherent year-to-year volatility is reduced by smoothing through the Actuarial Value of Assets, however investment experience can still have a sizable impact. As discussed in *Section 2, Subsection I, Volatility Ratios*, on page 42, a

1% asset gain or loss (relative to the assumed investment return) translates to about 9.3% of one-year's payroll. Since actuarial gains and losses are amortized over 20 years, there would be a 0.7% of payroll decrease/(increase) in the required contribution for each 1% asset gain or loss.

The single year market value rate of return over the last 10 years has ranged from a low of -1.00% to a high of 23.81%.

• Longevity Risk (the risk that mortality experience will be different than expected)

The actuarial valuation includes current life expectancy assumptions and an expectation of future improvement in life expectancy, which are significant assumptions given the relatively long duration of liabilities for pension plans. Emerging plan experience that does not match these expectations will result in increases or decreases in the actuarially determined contribution over time. This risk can be reduced by using tables appropriate for the Plan (public experience tables) that are weighted by benefit levels, and by using generational mortality projections. Effective with the June 30, 2020 valuation, the Board has adopted benefit weighted mortality tables with the generational mortality projections.

#### Other Risks

In addition to longevity, the valuation includes a variety of other assumptions that are unlikely to match future experience exactly. One example is projected salary scales over time. As salary is central to the determination of benefits paid in retirement, deviations from the projected salary scales could have a material impact on the benefits anticipated for each member. Examples of demographic assumptions include retirement, termination and disability assumptions, and will likely vary in significance for different groups (for example, disability assumptions are typically more significant for Safety groups).

Some plans also carry significant contribution risk, defined as the potential for actual future contributions deviating from expected future contributions. However, the employers have a proven track-record of making the Actuarially Determined Contributions based on the Board's Actuarial Funding Policy, so contribution risk is minimal.

#### **Evaluation of Historical Trends**

Past experience can help demonstrate the sensitivity of key results to the Plan's actual experience. Over the past ten years:

- The funded percentage on the Actuarial Value of Assets basis has decreased from 87.0% to 80.6%. For a more detailed history see *Section 2, Subsection G, Funded Status* starting on page 39.
- The average geometric investment return on the Actuarial Value of Assets over the last 10 years was 6.32%. This includes a high single-year return of 8.70% and a low of 2.57%. The average over the last 5 years 6.97%. For more details see the *Investment Return* table in Section 2, Subsection C on page 24.

- The primary source of new UAAL was the strengthening of assumptions through multiple assumption changes. For example, the assumption changes in 2020 changed the discount rate from 7.00% to 6.75% and updated mortality tables, adding \$216 million in unfunded liability. The assumption changes in 2017 changed the discount rate from 7.50% to 7.00% and updated mortality tables, adding \$824 million in unfunded liability. For more details on the unfunded liability changes see Section 3, Exhibit H, Table of Amortization Bases starting on page 74.
- The plan's funding policy effectively deals with these unfunded liabilities over time. This can be seen most clearly in Section 3, Exhibit I, Projection of UAAL Balances and Payments provided on pages 77 and 78.

#### **Maturity Measures**

In the last 10 years the ratio of members in pay status to active participants has increased from 0.71 to 1.01. An increased ratio indicates that the plan has grown in maturity over time. This is to be expected, but is also informative for understanding plan sensitivity to particular risks. For more details see *Section 2, Subsection A, Member Data* on page 15.

As pension plans mature, the cash needed to fulfill benefit obligations will increase over time. Therefore, cash flow projections and analysis should be performed to assure that the Plan's asset allocation is aligned to meet emerging pension liabilities. For the prior year benefits paid were \$135.2 million more than contributions received. Plans with high levels of negative cash flows may have a need for a larger allocation to income generating assets, which can create a drag on investment return. However, this plan currently has relatively low levels of negative cash flows. For more details on historical cash flows see the Comparison of Contributions with Benefits in *Section 2, Subsection B, Financial Information* on page 19.

A further discussion of plan maturity measures and how they relate to changes in assets and liabilities is included in *Section 2, Subsection I, Volatility Ratios* starting on page 42.

Note: Results may not total due to rounding.

These amounts are spread over the payroll for all Miscellaneous employers excluding Rio Linda Elverta Recreation and Parks District.
 This amount reflects the net withdrawal liability for the Library Authority and Air Quality Districts and is spread over the payroll for Miscellaneous County only. See page 93 for more details.

These amounts are due to deferred investment losses that were established prior to July 1, 2017. The total amount of those losses for Miscellaneous and Safety combined is \$9,275,175 for both June 30, 2018 and June 30, 2019, and \$7,648,231 for June 30, 2020.

<sup>&</sup>lt;sup>4</sup> These amounts are spread over the payroll for all Miscellaneous employers including Rio Linda Elverta Recreation and Parks District.

#### **Exhibit I: Projection of UAAL Balances and Payments**

#### **Exhibit I: Projection of UAAL Balances and Payments (continued)**

#### **Exhibit J: Definition of Pension Terms**

The following list defines certain technical terms for the convenience of the reader:

| Actuarial Accrued Liability for Actives:                      | The equivalent of the accumulated Normal Costs allocated to the years before the valuation date.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|---------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Actuarial Accrued Liability for Pensioners and Beneficiaries: | Actuarial Present Value of lifetime benefits to existing pensioners and beneficiaries. This sum takes account of life expectancies appropriate to the ages of the annuitants and the interest that the sum is expected to earn before it is entirely paid out in benefits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Actuarial Cost Method:                                        | A procedure allocating the Actuarial Present Value of Future Benefits to various time periods; a method used to determine the Normal Cost and the Actuarial Accrued Liability that are used to determine the actuarially determined contribution.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Actuarial Gain or Loss:                                       | A measure of the difference between actual experience and that expected based upon a set of Actuarial Assumptions, during the period between two Actuarial Valuation dates. To the extent that actual experience differs from that assumed, Actuarial Accrued Liabilities emerge which may be the same as forecasted, or may be larger or smaller than projected. Actuarial gains are due to favorable experience, e.g., assets earn more than projected, salary increases are less than assumed, members retire later than assumed, etc. Favorable experience means actual results produce actuarial liabilities not as large as projected by the actuarial assumptions. On the other hand, actuarial losses are the result of unfavorable experience, i.e., actual results yield actuarial liabilities that are larger than projected. |
| Actuarially Equivalent:                                       | Of equal Actuarial Present Value, determined as of a given date and based on a given set of Actuarial Assumptions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Actuarial Present Value (APV):                                | The value of an amount or series of amounts payable or receivable at various times, determined as of a given date by the application of a particular set of Actuarial Assumptions. Each such amount or series of amounts is:  Adjusted for the probable financial effect of certain intervening events (such as changes in                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|                                                               | compensation levels, marital status, etc.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|                                                               | Multiplied by the probability of the occurrence of an event (such as survival, death, disability, termination, etc.) on which the payment is conditioned, and                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|                                                               | Discounted according to an assumed rate (or rates) of return to reflect the time value of money.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Actuarial Present Value of Future Plan Benefits: | The Actuarial Present Value of benefit amounts expected to be paid at various future times under a particular set of Actuarial Assumptions, taking into account such items as the effect of advancement in age, anticipated future compensation, and future service credits. The Actuarial Present Value of Future Plan Benefits includes the liabilities for active members, retired members, beneficiaries receiving benefits, and inactive members entitled to either a refund or a future retirement benefit. Expressed another way, it is the value that would have to be invested on the valuation date so that the amount invested plus investment earnings would provide sufficient assets to pay all projected benefits and expenses when due. |
|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Actuarial Valuation:                             | The determination, as of a valuation date, of the Normal Cost, Actuarial Accrued Liability, Actuarial Value of Assets, and related Actuarial Present Values for a plan. An Actuarial Valuation for a governmental retirement system typically also includes calculations of items needed for compliance with GASB, such as the Actuarially Determined Contribution and the Net Pension Liability (NPL).                                                                                                                                                                                                                                                                                                                                                 |
| Actuarial Value of Assets (AVA):                 | The value of the Plan's assets as of a given date, used by the actuary for valuation purposes. This may be the market or fair value of plan assets, but commonly plans use a smoothed value in order to reduce the year-to-year volatility of calculated results, such as the funded ratio and the Actuarially Determined Contribution.                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Actuarially Determined:                          | Values that have been determined utilizing the principles of actuarial science. An actuarially determined value is derived by application of the appropriate actuarial assumptions to specified values determined by provisions of the law.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Actuarially Determined Contribution (ADC):       | The employer's periodic required contributions, expressed as a dollar amount or a percentage of covered plan compensation, determined under the Plan's funding policy. The ADC consists of the Employer Normal Cost and the Amortization Payment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Amortization Method:                             | A method for determining the Amortization Payment. The most common methods used are level dollar and level percentage of payroll. Under the Level Dollar method, the Amortization Payment is one of a stream of payments, all equal, whose Actuarial Present Value is equal to the Unfunded Actuarial Accrued Liability. Under the Level Percentage of Pay method, the Amortization Payment is one of a stream of increasing payments, whose Actuarial Present Value is equal to the Unfunded Actuarial Accrued Liability. Under the Level Percentage of Pay method, the stream of payments increases at the assumed rate at which total covered payroll of all active members will increase.                                                           |
| Amortization Payment:                            | The portion of the pension plan contribution, or ADC, that is intended to pay off the Unfunded Actuarial Accrued Liability.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Assumptions or Actuarial Assumptions: | The estimates upon which the cost of the Plan is calculated, including:  Investment return - the rate of investment yield that the Plan will earn over the long-term future;  Mortality rates - the rate or probability of death at a given age for employees and pensioners;  Retirement rates - the rate or probability of retirement at a given age or service;  Disability rates - the rate or probability of disability retirement at a given age;  Termination rates - the rate or probability at which employees of various ages are expected to leave employment for reasons other than death, disability, or retirement;  Salary increase rates - the rates of salary increase due to inflation, real wage growth and merit and promotion increases. |
|---------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Closed Amortization Period:           | A specific number of years that is counted down by one each year, and therefore declines to zero with the passage of time. For example, if the amortization period is initially set at 20 years, it is 19 years at the end of one year, 18 years at the end of two years, etc. See Open Amortization Period.                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Decrements:                           | Those causes/events due to which a member's status (active-inactive-retiree-beneficiary) changes, that is: death, retirement, disability, or withdrawal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Defined Benefit Plan:                 | A retirement plan in which benefits are defined by a formula applied to the member's compensation and/or years of service.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Defined Contribution Plan:            | A retirement plan, such as a 401(k) plan, a 403(b) plan, or a 457 plan, in which the contributions to the plan are assigned to an account for each member, the plan's earnings are allocated to each account, and each member's benefits are a direct function of the account balance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Employer Normal Cost:                 | The portion of the Normal Cost to be paid by the employer. This is equal to the Normal Cost less expected member contributions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Experience Study:                     | A periodic review and analysis of the actual experience of the Plan that may lead to a revision of one or more actuarial assumptions. Actual rates of decrement and salary increases are compared to the actuarially assumed values and modified as deemed appropriate by the Actuary.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Funded Ratio:                         | The ratio of the Actuarial Value of Assets (AVA) to the actuarial accrued liability (AAL). Plans sometimes calculate a market funded ratio, using the Market Value of Assets (MVA), rather than the AVA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Investment Return:                    | The rate of earnings of the Fund from its investments, including interest, dividends and capital gain and loss adjustments, computed as a percentage of the average value of the fund. For actuarial purposes, the investment return often reflects a smoothing of the capital gains and losses to avoid significant swings in the value of assets from one year to the next.                                                                                                                                                                                                                                                                                                                                                                                 |

| Normal Cost:                                | The portion of the Actuarial Present Value of Future Benefits allocated to a valuation year by the Actuarial Cost Method. Any payment with respect to an Unfunded Actuarial Accrued Liability is not part of the Normal Cost (see Amortization Payment). For pension plan benefits that are provided in part by employee contributions, Normal Cost refers to the total of member contributions and employer Normal Cost unless otherwise specifically stated. |
|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Open Amortization Period:                   | An open amortization period is one which is used to determine the Amortization Payment but which does not change over time. If the initial period is set as 30 years, the same 30-year period is used in each future year in determining the Amortization Period.                                                                                                                                                                                              |
| Unfunded Actuarial Accrued Liability:       | The excess of the Actuarial Accrued Liability over the Valuation Value of Assets. This value may be negative, in which case it may be expressed as a negative Unfunded Actuarial Accrued Liability, also called the Funding Surplus or an Overfunded Actuarial Accrued Liability.                                                                                                                                                                              |
| Valuation Date or Actuarial Valuation Date: | The date as of which the value of assets is determined and as of which the Actuarial Present Value of Future Plan Benefits is determined. The expected benefits to be paid in the future are discounted to this date.                                                                                                                                                                                                                                          |
| Valuation Value of Assets:                  | The Actuarial Value of Assets reduced by the value of non-valuation reserves.                                                                                                                                                                                                                                                                                                                                                                                  |

#### **Exhibit I: Actuarial Assumptions and Methods**

| Rationale for Assumptions:                         | The information and analysis used in selecting each assumption that has a significant effect on this actuarial valuation is shown in the July 1, 2016 through June 30, 2019 Actuarial Experience Study report dated May 11, 2020. Unless otherwise noted, all actuarial assumptions and methods shown below apply to all tiers. These assumptions were adopted by the Board. |
|----------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Economic Assumptions                               |                                                                                                                                                                                                                                                                                                                                                                              |
| Net Investment Return:                             | 6.75%; net of administrative and investment expenses.  Based on the Actuarial Experience Study reference above, expected administrative and investment expenses represent about 0.75% of the Actuarial Value of Assets.                                                                                                                                                      |
| Employee Contribution Crediting Rate:1             | 2.75% (assumed rate of inflation), compounded semi-annually.                                                                                                                                                                                                                                                                                                                 |
| Consumer Price Index:                              | Increase of 2.75% per year.  Miscellaneous and Safety Tier 1 benefits are assumed to increase at 2.75% per year.  Miscellaneous Tier 3, Tier 4 and Tier 5 and Safety Tier 2, Tier 3 and Tier 4 benefits are assumed to increase at 2.00% per year.  Miscellaneous Tier 2 receive no COLA increases.                                                                          |
| Payroll Growth:                                    | Inflation of 2.75% per year plus "across the board" salary increases of 0.25% per year, used to amortize the Unfunded Actuarial Accrued Liability as a level percentage of payroll.                                                                                                                                                                                          |
| Increase in Section 7522.10<br>Compensation Limit: | Increase of 2.75% per year from the valuation date.                                                                                                                                                                                                                                                                                                                          |

<sup>&</sup>lt;sup>1</sup> Current policy is to credit the member contribution account with interest up to the current 5-year Treasury rate, if such earnings are available. However, the difference in earnings between the 5-year Treasury rate and the target crediting rate will be applied to the other valuation reserves so that the overall valuation reserve target crediting rate is maintained at 6.75%.

#### **Salary Increases:**

The annual rate of compensation increase includes: inflation at 2.75%, plus "across the board" salary increases of 0.25% per year, plus the following merit and promotion increases:

#### **Merit and Promotion Increases**

| Years of    | Rate (        | %)     |  |
|-------------|---------------|--------|--|
| Service     | Miscellaneous | Safety |  |
| Less than 1 | 5.00          | 7.50   |  |
| 1 – 2       | 5.00          | 6.50   |  |

|                                  | <ul> <li>Pub-2010 Contingent Survivor Amount-Weighted Above-Median Mortality Table (separate tables for males<br/>and females), projected generationally with the two-dimensional mortality improvement scale MP-2019.</li> </ul>                                                             |
|                                  | The Pub-2010 mortality tables and adjustments as shown above reasonably reflect the mortality experience as of the measurement date. The generational projection is a provision for future mortality improvement.                                                                             |

#### **Pre-Retirement Mortality Rates:**

- Miscellaneous Members: Pub-2010 General Employee Amount-Weighted Above-Median Mortality Table (separate tables for males and females), projected generationally with the two-dimensional mortality improvement scale MP-2019.
- Safety Members: Pub-2010 Safety Employee Amount-Weighted Above-Median Mortality Table (separate tables for males and females), projected generationally with the two-dimensional mortality improvement scale MP-2019

| Rate | (%) |
|------|-----|
|      |     |

|     | Miscel | laneous | Sa   | fety   |
|-----|--------|---------|------|--------|
| Age | Male   | Female  | Male | Female |
| 20  | 0.04   | 0.01    | 0.04 | 0.01   |
| 25  | 0.02   | 0.01    | 0.03 | 0.02   |
| 30  | 0.03   | 0.01    | 0.04 | 0.02   |
| 35  | 0.04   | 0.02    | 0.04 | 0.03   |
| 40  | 0.06   | 0.03    | 0.05 | 0.04   |
| 45  | 0.09   | 0.05    | 0.07 | 0.06   |
| 50  | 0.13   | 0.08    | 0.10 | 0.08   |
| 55  | 0.19   | 0.11    | 0.15 | 0.11   |
| 60  | 0.28   | 0.17    | 0.23 | 0.14   |
| 65  | 0.41   | 0.27    | 0.35 | 0.20   |

Note that generational projections beyond the base year (2010) are not reflected in the above mortality rates. Miscellaneous pre-retirement deaths are assumed to be non-duty.

For Safety, 50% of pre-retirement deaths are assumed to be non-duty and the rest are assumed to be duty.

### Mortality Rates for Member Contributions:

- **Miscellaneous Members:** Pub-2010 General Healthy Retiree Amount-Weighted Above-Median Mortality Table (separate tables for males and females) with rates increased by 10%, projected 30 years (from 2010) with the two-dimensional mortality improvement scale MP-2019, weighted 40% male and 60% female.
- Safety Members: Pub-2010 Safety Healthy Retiree Amount-Weighted Above-Median Mortality Table (separate tables for males and females) with rates decreased by 5% for males, projected 30 years (from 2010) with the two-dimensional mortality improvement scale MP-2019, weighted 75% male and 25% female.

#### Assumptions for Optional Form of Benefits:

- Miscellaneous Service Retirees: Pub-2010 General Healthy Retiree Amount-Weighted Above-Median Mortality Table (separate tables for males and females) with rates increased by 10%, projected generationally with the two-dimensional mortality improvement scale MP-2019 weighted 40% male and 60% female.
- Safety Service Retirees: Pub-2010 Safety Healthy Retiree Amount-Weighted Above-Median Mortality
  Table (separate tables for males and females) with rates decreased by 5% for males, projected
  generationally with the two-dimensional mortality improvement scale MP-2019 weighted 75% male and
  25% female.
- Miscellaneous Disabled Retirees: Pub-2010 Non-Safety Disabled Retiree Amount-Weighted Mortality
  Table (separate tables for males and females), projected generationally with the two-dimensional mortality
  improvement scale MP-2019 weighted 40% male and 60% female.
- Safety Disabled Retirees: Pub-2010 Safety Disabled Retiree Amount-Weighted Mortality Table (separate tables for males and females), projected generationally with the two-dimensional mortality improvement scale MP-2019 weighted 75% male and 25% female.
- All Miscellaneous Beneficiaries: Pub-2010 Contingent Survivor Amount-Weighted Above-Median
  Mortality Table (separate tables for males and females), projected generationally with the two-dimensional
  mortality improvement scale MP-2019 weighted 60% male and 40% female.
- All Safety Beneficiaries: Pub-2010 Contingent Survivor Amount-Weighted Above-Median Mortality Table (separate tables for males and females), projected generationally with the two-dimensional mortality improvement scale MP-2019 weighted 25% male and 75% female.
- Note that for optional form of benefits, a 6.75% per annum interest rate with a 0.00% COLA is used.

**Disability Incidence:** 

|     | Rate (        | %)     |
|-----|---------------|--------|
| Age | Miscellaneous | Safety |
| 20  | 0.000         | 0.050  |
| 25  | 0.006         | 0.050  |
| 30  | 0.016         | 0.080  |
| 35  | 0.044         | 0.220  |
| 40  | 0.084         | 0.360  |
| 45  | 0.160         | 0.460  |
| 50  | 0.230         | 0.680  |
| 55  | 0.310         | 0.920  |
| 60  | 0.410         | 1.120  |
| 65  | 0.630         | 0.000  |

40% of Miscellaneous disabilities are assumed to be duty disabilities. The other 60% are assumed to be non-duty disabilities.

90% of Safety disabilities are assumed to be duty disabilities. The other 10% are assumed to be non-duty disabilities.

#### Termination:

Less Than Five Years of Service

| Years of    | Rate (        | %)     |
|-------------|---------------|--------|
| Service     | Miscellaneous | Safety |
| Less than 1 | 13.00         | 5.00   |
| 1 – 2       | 8.00          | 4.50   |
| 2 – 3       | 6.50          | 4.00   |
| 3 – 4       | 5.50          | 2.50   |
| 4 – 5       | 5.25          | 2.50   |

55% of the Miscellaneous terminated members and 50% of the Safety terminated members with less than five years of service are assumed to choose a refund of contributions. The other 45% and 50% of Miscellaneous and Safety terminated members, respectively, are assumed to choose a deferred vested benefit.

#### Five or More Years of Service

|     | Rate (        | %)     |
|-----|---------------|--------|
| Age | Miscellaneous | Safety |
| 20  | 5.25          | 2.00   |
| 25  | 5.25          | 2.00   |
| 30  | 5.10          | 2.00   |
| 35  | 4.40          | 1.55   |
| 40  | 3.40          | 1.10   |
| 45  | 2.70          | 1.00   |
| 50  | 2.44          | 1.00   |
| 55  | 2.34          | 1.00   |
| 60  | 2.24          | 1.00   |
| 65  | 1.48          | 0.00   |

30% of the Miscellaneous terminated members and 15% of the Safety terminated members with 5 or more years of service are assumed to choose a refund of contributions. The other 70% and 85% of Miscellaneous and Safety terminated members are assumed to choose a deferred vested benefit.

No termination is assumed after a member is assumed to retire.

|                         | Any new UAAL as a result of actuarial gains or losses identified in the annual valuation as of June 30 will be amortized over a period of 20 years.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|                         | Any new UAAL as a result of change in actuarial assumptions or methods will be amortized over a period of 20 years.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|                         | The change in UAAL as a result of any plan amendments will be amortized over a period of 15 years and the change in UAAL resulting from retirement incentive programs will be amortized over a period of up to 5 years.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Other Actuarial Methods |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Employer Contributions: | Employer contributions consist of two components:  Normal Cost                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|                         | The annual contribution rate that, if paid annually from a member's first year of membership through the year of retirement, would accumulate to the amount necessary to fully fund the member's retirement-related benefits. Accumulation includes annual crediting of interest at the assumed investment earning rate. The contribution rate is expressed as a level percentage of the member's compensation.                                                                                                                                                                                                                                                                                                              |
|                         | Contribution to the Unfunded Actuarial Accrued Liability (UAAL)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|                         | The annual contribution rate that, if paid annually over the UAAL amortization period, would accumulate to the amount necessary to fully fund the UAAL. Accumulation includes annual crediting of interest at the assumed investment earning rate. The contribution (or rate credit in the case of a negative UAAL) is calculated to remain as a level percentage of future active member payroll (including payroll for new members as they enter the System) assuming a constant number of active members. In order to remain as a level percentage of payroll, amortization payments (credits) are scheduled to increase at the annual rate of 3.00% (i.e., 2.75% inflation plus 0.25% across-the-board salary increase). |
|                         | Starting with the June 30, 2015 valuation, we have added to the Miscellaneous employer UAAL rate for the County an amount to reflect the net withdrawal liability for the Library Authority and Air Quality Districts when they terminated their affiliation with the County and became special districts.                                                                                                                                                                                                                                                                                                                                                                                                                   |
|                         | The amortization policy is described above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|                         | The recommended employer contributions are provided in Section 2, Subsection F.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|                         | Employer Normal Cost and UAAL contribution rates are calculated assuming payments made at the end of every pay period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

#### **Member Contributions:**

Miscellaneous Tiers 1, 2, 3 & 4 and Safety Tiers 1, 2, & 3

Articles 6 and 6.8 of the 1937 Act define the methodology to be used in the calculation of member basic contribution rates for Miscellaneous members and Safety members, respectively, in the legacy tiers. The basic contribution rate is determined as that percentage of compensation which if paid annually from a member's first year of membership through the prescribed retirement age would accumulate to the amount necessary to fund a prescribed annuity.

The annuity is equal to:

- 1/240 of Final Average Salary per year of service at age 55 for current Miscellaneous Tier 1, Tier 2 and Tier
   3 members
- 1/120 of Final Average Salary per year of service at age 60 for current Miscellaneous Tier 4 members
- 1/100 of Final Average Salary per year of service at age 50 for current Safety Tier 1, Tier 2 and Tier 3
  members

In addition to their basic contributions, members in the legacy tiers pay one-half of the total Normal Cost necessary to fund their cost-of-living benefits. The cost to provide the cost-of-living benefits is offset somewhat by the balance available in an account maintained in the valuation to offset member's COLA rates in the legacy tiers. Accumulation includes semi-annual crediting of interest at one-half of the United States 5-year Treasury rate for the last business day of the interest crediting period. For members paying half rates prior to the June 30, 2015 valuation, their rates should be exactly one-half of the rates described above. Note that effective with the June 30, 2015 valuation, all members are reported as paying at least full-rate.

Starting in 2014-2015, most County members in the legacy tiers agreed to contribute either 1/3, 1/4, or 1/5 of the difference between the employee's then current Normal Cost and 50% of the total Normal Cost rate. Those members agreed to contribute an additional 1/3, 1/4, or 1/5 of the difference in the Normal Cost rate in 2015-2016, 2016-2017 and 2017-2018.

For Rep Unit 26 Miscellaneous members, the member rates they started to contribute in 2015-2016 were 1% of payroll higher than the rates they paid in 2014-2015. In developing their rates for 2016-2017, we added an additional 2% of payroll to the rates for 2015-2016.

For Orangevale Recreation and Park District members, the member rates they started to contribute in 2015-2016 were 1/2 of the difference between the employee's then current Normal Cost and 50% of the total Normal Cost rate. Those members agreed to contribute an additional 1/2 of the difference in the Normal Cost rate in 2016-2017.

For Rep Unit 16 Miscellaneous members, the member rates effective January 1, 2018 are 1/2 of the difference between the employee's then current Normal Cost and 50% of the total Normal Cost rate. Those members have agreed to contribute an additional 1/4 of the difference in the Normal Cost rate in 2018-2019 and 2019-2020.

| Member Contributions (continued):                  | For Rep Unit 25 Miscellaneous members, the member rates effective January 1, 2018 are 2% of payroll higher than the employees' then current Normal Cost. These members have agreed to contribute an additional 2% of payroll in 2018-2019 and to contribute 50% of the total Normal Cost rate in 2019-2020.  Effective in 2019-2020, all of the above members who have previously agreed to contribute a higher Normal Cost rate are paying 50% of the total Normal Cost rate.  Miscellaneous Tier 5 and Safety Tier 4  Pursuant to Section 7522.30(a) of the Government Code, Miscellaneous Tier 5 and Safety Tier 4 members are required to contribute at least 50% of the Normal Cost rate. In addition, there are certain additional requirements that would have to be met such as requiring the new employees to pay the contribution rate of "similarly situated employees", if it is greater. (reference: Section 7522.30(c)). We further understand that different rules may have to be applied for collectively bargained employees, non-represented, managerial or other supervisory employees. (reference: Section 7522.30(e)). In preparing the Normal Cost rates in this report, we have assumed that exactly 50% of the Normal Cost would be paid by the new members and we have taken into account in this valuation only the requirements of Section 7522.30(c), but not requirements of Section 7522.30(e).  The member contribution rates for all members are provided in Section 4, Exhibit III. |

|                                                    | Member contributions are assumed to be made at the end of every pay period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Internal Revenue Code<br>Section 415:              | Section 415 of the Internal Revenue Code (IRC) specifies the maximum benefits that may be paid to an individual from a defined benefit plan and the maximum amounts that may be allocated each year to an individual's account in a defined contribution plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|                                                    | A qualified pension plan may not pay benefits in excess of the Section 415 limits. The ultimate penalty for non-compliance is disqualification: active participants could be taxed on their vested benefits and the IRS may seek to tax the income earned on the plan's assets.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|                                                    | In particular, Section 415(b) of the IRC limits the maximum annual benefit payable at the Normal Retirement Age to a dollar limit of \$160,000 indexed for inflation. That limit is \$230,000 for 2020. Normal Retirement Age for these purposes is age 62. These are the limits in simplified terms. They must be adjusted based on each participant's circumstances, for such things as age at retirement, form of benefits chosen and after tax contributions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|                                                    | Non-CalPEPRA benefits in excess of the limits may be paid through a qualified governmental excess plan that meets the requirements of Section 415(m).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|                                                    | Legal Counsel's review and interpretation of the law and regulations should be sought on any questions in this regard.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|                                                    | Contribution rates determined in this valuation have not been reduced for the Section 415 limitations. However, it is anticipated that PEPRA members will not be limited in the future due to the PEPRA compensation limit applied in the determination of their benefit. Actual limitations will result in gains as they occur.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Justification for Change in Actuarial Assumptions: | The following assumptions have been changed since the prior valuation. Rationale for these changes are presented in the July 1, 2016 through June 30, 2019 Actuarial Experience Study:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Prior Actuarial Assumptions:                      |                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                      |                                                                    |                                    |

<sup>&</sup>lt;sup>1</sup> Current policy is to credit the member contribution account with interest up to the current 5-year Treasury rate, if such earnings are available. However, the difference in earnings between the 5-year Treasury rate and the target crediting rate will be applied to the other valuation reserves so that the overall valuation reserve target crediting rate is maintained at 7.00%.

## Prior Actuarial Assumptions (continued):

Termination:

#### Less Than Five Years of Service

| Years of    | Rate (%)      |        |  |  |
|-------------|---------------|--------|--|--|
| Service     | Miscellaneous | Safety |  |  |
| Less than 1 | 13.00         | 6.00   |  |  |
| 1 – 2       | 8.00          | 5.00   |  |  |
| 2 – 3       | 7.00          | 4.00   |  |  |
| 3 – 4       | 6.00          | 3.00   |  |  |
| 4 – 5       | 5.50          | 3.00   |  |  |

65% of the Miscellaneous terminated members and 50% of the Safety terminated members with less than 5 years of service are assumed to choose a refund of contributions. The other 35% and 50% of Miscellaneous and Safety terminated members, respectively, are assumed to choose a deferred vested benefit.

#### Five or More Years of Service

|     | Rate (%)      |        |  |
|-----|---------------|--------|--|
| Age | Miscellaneous | Safety |  |
| 20  | 5.50          | 2.50   |  |
| 25  | 5.50          | 2.50   |  |
| 30  | 5.20          | 2.20   |  |
| 35  | 4.40          | 1.70   |  |
| 40  | 3.40          | 1.35   |  |
| 45  | 2.70          | 1.10   |  |
| 50  | 2.44          | 1.00   |  |
| 55  | 2.34          | 1.00   |  |
| 60  | 2.24          | 1.00   |  |
| 65  | 1.48          | 0.00   |  |

40% of the Miscellaneous terminated members and 15% of the Safety terminated members with 5 or more years of service are assumed to choose a refund of contributions. The other 60% and 85% of Miscellaneous and Safety terminated members are assumed to choose a deferred vested benefit.

No termination is assumed after a member is assumed to retire.

Retirement Age and Benefit for Deferred Vested Members:

Miscellaneous Retirement Age:59

Safety Retirement Age: 53

Future deferred vested members who terminate with less than five years of service and are not vested are assumed to retire at age 70 for both Miscellaneous and Safety if they decide to leave their contributions on deposit.

35% of future Miscellaneous and 45% of future Safety deferred vested members are assumed to continue to work for a reciprocal employer. For reciprocals, 4.50% and 5.25% compensation increases are assumed per annum for Miscellaneous and Safety, respectively.

### **Exhibit II: Summary of Plan Provisions**

This exhibit summarizes the major provisions of the Plan included in the valuation. It is not intended to be, nor should it be interpreted as, a complete statement of all plan provisions.

| Plan Year:                                                        | July 1 through June 30                                                                                                                                                                                                    |
|-------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Membership Eligibility:                                           | Membership with SCERS usually begins with the employment by the County or member District as a permanent full-time or part-time employee as provided in the County Salary Resolution or the District's Salary Resolution. |
| Miscellaneous Tier 1                                              | All Miscellaneous members hired prior to September 27, 1981.                                                                                                                                                              |
| Miscellaneous Tier 2 & Tier 3                                     | All Miscellaneous members hired on or after September 27, 1981. Membership into Tier 2 or Tier 3 is determined by date of hire and by bargaining unit.                                                                    |
| Miscellaneous Tier 4                                              | All Miscellaneous members hired on or after January 1, 2012 as adopted by the County. Membership into Tier 4 is determined by date of hire.                                                                               |
| Miscellaneous Tier 5                                              | All Miscellaneous members hired on or after January 1, 2013.                                                                                                                                                              |
| Safety Tier 1 & Tier 2                                            | Membership into Tier 1 or Tier 2 for Safety employee is determined by date of hire and by bargaining unit.                                                                                                                |
| Safety Tier 3                                                     | All Safety members hired on or after January 1, 2012 as adopted by the County. Membership into Tier 3 is determined by date of hire.                                                                                      |
| Safety Tier 4                                                     | All Safety members hired on or after January 1, 2013.                                                                                                                                                                     |
| Final Compensation for Benefit Determination:                     |                                                                                                                                                                                                                           |
| Miscellaneous and Safety Tier 1                                   | Highest consecutive 1 year (12 months) of compensation earnable (§31462.1) (FAS1).                                                                                                                                        |
| Miscellaneous Tier 2, Tier 3, & Tier 4 and Safety Tier 2 & Tier 3 | Highest consecutive 3 years (36 months) of compensation earnable. (§31462) (FAS3).                                                                                                                                        |
| Miscellaneous Tier 5 and Safety<br>Tier 4                         | Highest consecutive 3 years (36 months) of pensionable compensation. (§7522.10(c), §7522.32 and §7522.34) (FAS3).                                                                                                         |
| Service:                                                          | Years of service (Yrs).                                                                                                                                                                                                   |

| Death in Line-of-Duty                                                | 50% of Final Compensation or 100% of Service Retirement benefit, if greater, payable to spouse or minor children (§31787).                                                                                                                                                                                                                                    |
| Vested Members                                                       |                                                                                                                                                                                                                                                                                                                                                               |
| Eligibility                                                          | Five years of service.                                                                                                                                                                                                                                                                                                                                        |
| Basic benefit                                                        | 60% of the greater of Service Retirement or Non-Duty Disability Retirement benefit payable to surviving eligible spouse (§31765.1, §31781.1), in lieu of the basic lump sum benefit above.                                                                                                                                                                    |
| Death in Line-of-Duty                                                | 50% of Final compensation or 100% of Service Retirement benefit, if greater, payable to spouse or minor children (§31787).                                                                                                                                                                                                                                    |
| Death After Retirement:                                              |                                                                                                                                                                                                                                                                                                                                                               |
| All Members                                                          |                                                                                                                                                                                                                                                                                                                                                               |
| Service Retirement or Non Service<br>Connected Disability Retirement | Unless another option was selected at retirement, 60% of member's unmodified allowance continues to eligible spouse (§31760.1) and an additional \$4,000 lump sum benefit is payable to member's beneficiary (§31789.3). An eligible spouse is a surviving spouse who was married to the member at least one year prior to the date of retirement (§31760.1). |
| Line-of-Duty Disability                                              | Unless another option was selected at retirement, 100% of member's allowance continued to eligible spouse (§31786) and an additional \$4,000 lump sum benefit is payable to member's beneficiary (§31789.3). An eligible spouse is a surviving spouse who was married to the member at least one year prior to the date of retirement (§31760.1).             |
| Withdrawal Benefits:                                                 |                                                                                                                                                                                                                                                                                                                                                               |
| Less than Five Years of Service                                      | Refund of accumulated employee contributions with interest, or benefit at age 70 (§31628). A member may also elect to leave contributions on deposit in the retirement fund (§31629.5).                                                                                                                                                                       |
| Five or More Years of Service                                        | If contributions left on deposit, eligible for retirement benefits at any time after eligible to retire (§31700).                                                                                                                                                                                                                                             |

| Post-Retirement Cost-of-Living Benefits:                                 |                                                                                                                               |
|--------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| Miscellaneous Tier 1 and Safety<br>Tier 1                                | Annual adjustment based on Consumer Price Index to a maximum of 4% per year; excess "banked" (§31874.2).                      |
| Miscellaneous Tier 2                                                     | None.                                                                                                                         |
| Miscellaneous Tier 3, Tier 4 & Tier 5 and Safety Tier 2, Tier 3 & Tier 4 | Annual adjustment based on Consumer Price Index to a maximum of 2% per year; excess "banked" (§31870).                        |
| Member Contributions:                                                    | Please refer to Section 4, Exhibit III for specific rates.                                                                    |
| Miscellaneous Tier 1                                                     |                                                                                                                               |
| Basic                                                                    | Entry-age based rates that provide for an annuity at age 55 equal to 1/240 of FAS1 (§31621.3).                                |
| Cost-of-Living                                                           | Entry-age based rates that provide for one-half of future Cost-of-Living costs.                                               |
| Miscellaneous Tier 2                                                     |                                                                                                                               |
| Basic                                                                    | Entry-age based rates that provide for an annuity at age 55 equal to 1/240 of FAS3 (§31621.3).                                |
| Cost-of-Living                                                           | None.                                                                                                                         |
| Miscellaneous Tier 3                                                     |                                                                                                                               |
| Basic                                                                    | Entry-age based rates that provide for an annuity at age 55 equal to 1/240 of FAS3 (§31621.3).                                |
| Cost-of-Living                                                           | Entry-age based rates that provide for one-half of future Cost-of-Living costs.                                               |
| Miscellaneous Tier 4                                                     |                                                                                                                               |
| Basic                                                                    | Entry-age based rates that provide for an annuity at age 60 equal to 1/120 of FAS3 (§31621).                                  |
| Cost-of-Living                                                           | Entry-age based rates that provide for one-half of future Cost-of-Living costs.                                               |
| Miscellaneous Tier 5                                                     | 50% of the total Normal Cost rate.                                                                                            |
| Safety Tier 1, Tier 2 & Tier 3                                           |                                                                                                                               |
| Basic                                                                    | Entry-age based rates that provide for an annuity at age 50 equal to 1/100 of FAS1 (FAS3 for Tier 2 and Tier 3). (§31639.25). |
| Cost-of-Living                                                           | Entry-age based rates that provide for one-half of future Cost-of-Living costs.                                               |
| Safety Tier 4                                                            | 50% of the total Normal Cost rate.                                                                                            |

#### **Member Contributions (continued):**

Notes

- The above rates are known as full rates. For members paying half rates prior to the June 30, 2015 valuation, their rates should be one-half of the rates provided in this report. Note that effective with the June 30, 2015 valuation, all members are reported as paying at least full-rate. In addition, for members entering the plan on or after January 1, 1975, they pay a rate based on a single entry age (§31621.11 and §31639.26).
- Starting in 2014-2015, most County members in the legacy tiers agreed to contribute either 1/3, 1/4, or 1/5 of the difference between the employee's then current Normal Cost and 50% of the total Normal Cost rate. Those members agreed to contribute an additional 1/3, 1/4, or 1/5 of the difference in the Normal Cost rate in 2015-2016, 2016-2017 and 2017-2018.
- For Rep Unit 26 Miscellaneous members, the member rates they started to contribute in 2015-2016 were 1% of payroll higher than the rates they paid in 2014-2015. In developing their rates for 2016-2017, we added an additional 2% of payroll to the rates for 2015-2016.
- For Orangevale Recreation and Park District members, the member rates they started to contribute in 2015-2016 were 1/2 of the difference between the employee's then current Normal Cost and 50% of the total Normal Cost rate. Those members agreed to contribute an additional 1/2 of the difference in the Normal Cost rate in 2016-2017.
- For Rep Unit 16 Miscellaneous members, the member rates effective January 1, 2018 are 1/2 of the difference between the employee's then current Normal Cost and 50% of the total Normal Cost rate. Those members have agreed to contribute an additional 1/4 of the difference in the Normal Cost rate in 2018-2019 and 2019-2020.
- For Rep Unit 25 Miscellaneous members, the member rates effective January 1, 2018 are 2% of payroll higher than the employees' then current Normal Cost. These members have agreed to contribute an additional 2% of payroll in 2018-2019 and to contribute 50% of the total Normal Cost rate in 2019-2020.
- Effective in 2019-2020, all of the above members who have previously agreed to contribute a higher Normal Cost rate are paying 50% of the total Normal Cost rate.

| Other Information:          | Safety Tier 1, Tier 2 & Tier 3 members with 30 or more years of service are exempt from paying member contributions. The same applies for Miscellaneous members hired on or before March 7, 1973. |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Changes in Plan Provisions: | There have been no changes in plan provisions since the last valuation.                                                                                                                           |

Note: The summary of major plan provisions is designed to outline principal plan benefits as interpreted for purposes of the actuarial valuation. If the System should find the plan summary not in accordance with the actual provisions, the System should alert the actuary so they can both be sure the proper provisions are valued.

## **Exhibit III: Member Contribution Rates**

### Comparison of Member Rate<sup>1</sup> from the June 30, 2019 and June 30, 2020 Valuations

Contribution rates for most Miscellaneous County members and all Safety County members in the legacy tiers who have agreed to contribute an additional Normal Cost before and after the gross-up for the integration with Social Security can be found in Section 4, Exhibit VI.

|               | June 30, 2020 |       |        |       | June 30, 2019 | _ ,   |                                  |
|---------------|---------------|-------|--------|-------|---------------|-------|----------------------------------|
| Miscellaneous | Basic         | COLA  | Total  | Basic | COLA          | Total | Increase /<br>(Decrease) in Rate |
| Tier 1        | 4.34%         | 2.41% | 6.75%  | 4.05% | 1.93%         | 5.98% | 0.77%                            |
| Tier 2        | 4.16%         | 0.00% | 4.16%  | 3.87% | 0.00%         | 3.87% | 0.29%                            |
| Tier 3        | 4.16%         | 1.85% | 6.01%  | 3.87% | 1.64%         | 5.51% | 0.50%                            |
| Tier 4        | 7.30%         | 1.69% | 8.99%  | 6.82% | 1.54%         | 8.36% | 0.63%                            |
| Tier 5        | 8.24%         | 1.77% | 10.01% | 7.80% | 1.65%         | 9.45% | 0.56%                            |

|        |        | June 30, 2020 |         |        | June 30, 2019 |        | _                                |
|--------|--------|---------------|---------|--------|---------------|--------|----------------------------------|
| Safety | Basic  | COLA          | Total   | Basic  | COLA          | Total  | Increase /<br>(Decrease) in Rate |
| Tier 1 | 12.10% | 6.76%         | 18.86%² | 11.15% | 8.69%         | 19.84% | -0.98%                           |
| Tier 2 | 11.48% | 4.56%         | 16.04%  | 10.60% | 4.19%         | 14.79% | 1.25%                            |
| Tier 3 | 11.48% | 4.04%         | 15.52%  | 10.60% | 3.75%         | 14.35% | 1.17%                            |
| Tier 4 | 11.83% | 3.28%         | 15.11%  | 11.74% | 3.23%         | 14.97% | 0.14%                            |

<sup>&</sup>lt;sup>1</sup> Members who enter on or after 1/1/1975 contribute as indicated above and all others contribute the rate at their respective entry ages.

<sup>&</sup>lt;sup>2</sup> There is a reduction in the member rate for Safety Tier 1 primarily as a result of an increase in the COLA offset as the number of active members in that Tier shrunk by about one-third during 2019-2020. Also, the remaining members are expected to retire earlier under the new assumptions used in this valuation.

## **Exhibit III: Member Contribution Rates (continued)**

Safety Tier 4 Members' Contribution Rates Based on the June 30, 2020 Actuarial Valuation (as a % of monthly payroll)

#### All Eligible Pay<sup>1</sup>

|             | Basic  | COLA  | Total  |
|-------------|--------|-------|--------|
| All Members | 11.83% | 3.28% | 15.11% |

<sup>&</sup>lt;sup>1</sup> It is our understanding that in the determination of pension benefits under the CalPEPRA formulas, the compensation that can be taken into account for 2020 is equal to \$126,291 (reference: Section 7522.10). These amounts should be adjusted for changes to the Consumer Price Index for All Urban Consumers after 2020 (reference: Section 7522.10(d)).

Interest: 6.75% per annum

COLA: 2.75%

Mortality: See Section 4, Exhibit I

Salary Increase: Inflation (2.75%) + Across-the-Board Increase (0.25%) + Merit (See Section 4, Exhibit I)

COLÁ Loading Factor: 27.73% Non-Refundability Factor: 98.74%

# Exhibit IV: Calculation of Additional District Rate as of June 30, 2020 for Certain District Employers

Additional contributions were made by the County to buy down the County and Superior Court UAAL contribution rate through the issuance of Pension Obligation Bonds (POB). As the other district employers did not participate in the POBs, their rates as calculated in this report have been increased to reflect that they did not buy down their UAAL rates and for other adjustments (Districts with All Service Improvements vs. Future Service Improvements, Rio Linda Elverta becoming a participating employer effective October 1, 2017, two-year phase-in of cost impact of actuarial assumptions). The POB rate adjustment has been calculated as follows:

### The Calculation of the Additional District Rate as Of June 30, 2020

| June 30, 2019 POB Balance                               | \$31,044,897 |
|---------------------------------------------------------|--------------|
| Additional Rate in June 30, 2019 Valuation              | 8.21%        |
| June 30, 2019 Projected District Payroll <sup>1</sup>   | \$31,606,000 |
| June 30, 2020 POB Balance <sup>2</sup>                  | \$30,532,368 |
| 15-Year Amortization                                    | 0.087658     |
| June 30, 2020 Projected District Payroll <sup>1</sup>   | \$34,688,000 |
| Additional Rate in June 30, 2020 Valuation <sup>3</sup> | 7.72%        |

<sup>&</sup>lt;sup>1</sup> Excluding the payroll for Rio Linda Elverta Recreation and Parks District.

<sup>&</sup>lt;sup>2</sup> Equal to \$31,044,897 \* 1.07 – 8.21% \* \$31,606,000 \* (1+0.07/2).

<sup>&</sup>lt;sup>3</sup> Equal to \$30,532,368 \* 0.087658 / \$34,688,000.

<sup>&</sup>lt;sup>1</sup> Includes Carmichael Recreation and Park District, Elk Grove Cosumnes Cemetery District, Mission Oaks Recreation and Park District, Sacramento Employment and Training Agency (S.E.T.A.), and Sunrise Recreation and Park District.

Includes Orangevale Recreation and Park District only.

Includes all the employers referenced in footnotes 1 and 2.

<sup>&</sup>lt;sup>4</sup> Includes Fair Oaks Cemetery District and Galt-Arno Cemetery District.

# Exhibit VI: Normal Cost Rates with Additional Member Contributions under Cost Sharing Arrangements

The Normal Cost rates adjusted for the additional member contributions are developed in the following steps:

- Step A: Calculate the Normal Cost rates for the employer and the member assuming that no members contribute an additional portion of the Normal Cost.
- Step B: Calculate the Normal Cost rates for the employer and the member assuming that members pay exactly one-half of the total Normal Cost rate. In this step, we have adjusted the employer rate to account for the cost associated with the cessation of member contributions for Miscellaneous members hired on or before March 7, 1973 and after 30 years of service and for Safety Tier 1, Tier 2 and Tier 3 members after 30 years of service
- Step C: Gross up the member Normal Cost rates developed in Step B for the integration with Social Security

These steps are outlined in the following pages.

# Exhibit VI: Normal Cost Rates with Additional Member Contributions under Cost Sharing Arrangements (continued)

Step A: Normal Cost (Prior to any Additional Normal Cost Contributions by the Member)

Total Normal Cost Contribution Rates (Employer and Member Normal Cost Rates)

| Total               | 56.20%                                  | 42.59%  | 40.03%  |  |  |

Note: Member rates shown are for annual salary in excess of \$4,200 (or monthly salary of \$350). For annual salary less than \$4,200 (or monthly salary of \$350), the rates are equal to 2/3 of the rates shown. Also, the member COLA buydown is a non-cash contribution item.

<sup>&</sup>lt;sup>1</sup> The employer rate has been adjusted by 0.42% of payroll to account for the cost associated with the cessation of member contributions for those members hired on or before March 7, 1973 and after 30 years of service.

<sup>&</sup>lt;sup>2</sup> The employer rate has been adjusted by 3.96% of payroll to account for the cost associated with the cessation of member contributions after 30 years of service.

<sup>&</sup>lt;sup>3</sup> The employer rate has been adjusted by 0.13% of payroll to account for the cost associated with the cessation of member contributions after 30 years of service.

<sup>&</sup>lt;sup>4</sup> The employer rate has been adjusted by 0.01% of payroll to account for the cost associated with the cessation of member contributions after 30 years of service.

<sup>&</sup>lt;sup>5</sup> The member rates have not been grossed up for the rate on the first \$4,200 in annual salary being less (by one-third) when compared to the 50:50 total Normal Cost rate. Please see the following page for the rates after the gross-up.

# Exhibit VI: Normal Cost Rates with Additional Member Contributions Under Cost Sharing Arrangements (continued)

Step C: Normal Cost (Assuming Exactly 50:50 Payment by the Employer and the Member) – After Gross-up for the Integration with Social Security

Total Normal Cost Contribution Rates (Employer and Member Normal Cost Rates)
